

Tina and King David  
are good friends.

This is what  $4 \times 3$  looks like:

$$4 \times 3 = 12$$

This is what  $12 \div 4$  looks like:

$$12 \div 4 = 3$$

Do you see a pattern?

Use that pattern to figure out these equations:

If  $2 \times 4 = 8$ , then  $8 \div 4 = \square$

If  $3 \times 3 = 9$ , then  $9 \div 3 = \square$

If  $2 \times 5 = 10$ , then  $10 \div 2 = \square$

If  $6 \times 2 = 12$ , then  $12 \div 2 = \square$

If  $7 \times 3 = 21$ , then  $21 \div 7 = \square$
